MADISON COUNTY COMMUNITY CORRECTION RESIDENTS TEST POSITIVE FOR COVID-19

Anderson, IN – On Wednesday May 6, 2020, the Madison County Health Department requested, on behalf of Madison County Community Corrections (MCCC), COVID-19 virus testing. Thirteen of the thirty-two residents at MCCC tested positive for the virus. Mason Brizendine, Director of MCCC, stated “I’ve been working closely with the Madison County Health Department, as well as our county judges to address the health issues for our residents and the staff.” These thirteen positive test numbers are reflected in our daily number previously reported in Madison County, IN.

Residents who tested positive have been removed from the general population inside the facility and the staff is currently monitoring the residents who tested negative. None of the residents who tested positive were showing signs of COVID-19 when they were tested. The ISDH Taskforce went into MCCC as a proactive measure to test at the request of the Director and the Madison County Health Department.
